

MAGNETIC EQUIPMENTS

Magnetic Lifter

Magnetic Filter

Hopper Magnet

Magnetic Pulley

Roller Magnetic Separator

ROLLER MAGNETIC SEPARATOR

The separator is used in the industries to remove the ironic material from the product. They are prepared from the top materials to ensure effective removal of the ferrous objects. The roller magnetic separator is specially designed to remove minute and micro particles. They are offered in dust free models to avoid any kind of spilling of dust. These separators come in various kind of specifications as per the need of the client.

MAGNETIC LIFTER

The lifter we provide are made from high grade neodymium magnets and the body of the lifter is made from carbon steel and manganese steel. They are produced using the latest technology and are embedded with best features to make the working of the lifter smooth and easy.

The magnetic lifter is used in many industries like steel block, rod and sheets to lift and move them to a specified place effectively.

MAGNETIC FILTER

The magnetic filter is used to filter out the unnecessary ionic elements from the substance and make the product pure. We utilize the best design and features in filter to make the process easy. The magnetic filter is offered in number of different shape and size as per the requirement of the industry. They are considered as the best option to remove impurities from liquid and slurry products.

HOPPER MAGNET

The hopper magnetic is prepared in the compact shape and size that is designed by our professional teams. They are helpful in the removal of powdered form of iron particles from the substance.

The hopper magnet is prepared in the standard as well as customized version to suit the needs of industry. These magnets are offered at the best considered price range.

MAGNETIC PULLEY

The magnetic pulley is fixed on the conveyor belt so that when the material passes through pulley all the unwanted and unnecessary particles from material. They are highly useful in the industries like mining, coal, recycling

and other processing industries and applications. The magnetic pulley comes in various shape and size depending on the need of the application area in the industry.
